

Lab – 6 – Java Swing Designer

1. Create a Swing GUI application to convert between the following pairs of units of measure by **clicking convert button**.

1. miles and kilometers,
2. pounds and kilograms,
3. gallons and liters,
4. Fahrenheit and Centigrade.

2. Design Swing GUI to perform the String Manipulations as per the screen.

Create the necessary ActionListeners so that, when Count Letters is clicked, the number of characters in the Input field is placed in the Output field,

and, when Reverse Letters is clicked, the letters in the input area are reversed and placed in the output area,

and, when the Remove Duplicates is clicked, the duplicate letters are removed and the result is placed in the output area.
